

Solidum Cat Bond Fund I - classes September 30, 2025

Fund objective

The Solidum Cat Bond Fund is an open-end fund registered in Liechtenstein as a UCITS pursuant to Liechtenstein law in the legal form of a trust (UCITS V). The Fund's objective is to achieve long term capital appreciation and low correlation to fixed income, equity and non-traditional investments. The Fund holds a diversified portfolio of catastrophe bonds or notes and other instruments transferring insurance event risk or genuine insurance underwriting risk. As the insurance event linked securities market evolves, new products may become available and the Fund may also invest in such products. The portfolio is actively managed in an attempt to achieve optimal returns in the context of the prevailing market environment.

In addition to its functional currency USD, the Fund offers CHF and EUR share classes. The equity capital of the CHF and EUR share classes is hedged to reduce effects of FX effects.

Manager comment

The fund achieved a very pleasing result of 1.77% to 2.11% across the three currency classes in September.

After an unusually quiet period at the beginning of the month, storm activity increased significantly in the most important tropical basins during the second half of September. Three hurricanes formed in the Atlantic after the middle of the month, with Hurricanes Gabrielle and Humberto developing into storms of the second-highest and highest categories, respectively. All were 'Cape Verde-type' hurricanes, which are systems that develop as tropical disturbances off the African coast and then drift westward with the trade winds, increasing in intensity over the warm mid-Atlantic waters, and occasionally developing into hurricanes. All relevant storms so far have curved off into the open Atlantic and have spared the US East Coast. Still, the cumulative ACE index per end of September stands very close to the climatological average of the last 30 years. ACE or Accumulated Cyclone Energy is an estimate of the energy that a storm system releases during its active phase and can be used as a measure to determine the overall intensity of a hurricane season.

The management team expects the storm activity to gradually shift from the Atlantic towards the Caribbean and the Gulf of Mexico for the rest of the season. Since the surface water temperatures in these regions remain high, it is very possible that this year's season activity will extend into November.
