

Solidum Event Linked Securities Fund Limited - SAC Fund 2

Classes I-1 and I-2
December 31, 2024

Fund objective

The Solidum ELS Fund is an open-end fund registered in Bermuda. The Fund's objective is to achieve long term capital appreciation and low correlation to fixed income, equity and non-traditional investments. The Fund holds a diversified portfolio of insurance linked securities which can have the structural format of catastrophe bonds, notes and derivatives, industry loss warranties, sidecars, reinsurance contracts or other instruments transferring insurance event risk or genuine insurance underwriting risk. As the insurance event linked securities market evolves, new products may become available and the Fund may also invest in such products. The portfolio is actively managed in an attempt to achieve optimal returns in the context of the prevailing market environment. Leverage can be used in order to enhance investment returns, and active hedging may be employed to minimize downside risk. In addition to its functional currency USD, the Fund offers CHF, EUR and GBP share classes. The equity capital of the non-USD share classes is hedged to reduce FX effects.

Positive month (since inception)	87%			

Manager comment

The year 2024 ended with a strong result, which helped the Fund to finish 2024 as the best year since the launch of the institutional classes in 2014. With a gain of over 17.6% in both classes, the Fund topped the previous record.

As in the previous year, the ILS market offered very high risk spreads also in 2024. The asset class thus presented itself as an investment opportunity that compensated its investors with very attractive terms for the event risk associated with the engagement.

The good result is all the more remarkable as it was achieved in a year in which the overall loss burden for the insurance industry was by no means negligible. According to Munich Re, insured losses worldwide totalled about \$140 billion. The lion's share of this came from the United States, with about \$50 billion contributed by the two hurricanes, Helene and Milton, which struck Florida and the US Southeast in late September and early October. Another more than \$50 billion was caused by the Severe Convective Storm hazard class, which includes hail, tornadoes and thunderstorms. For some time now, this hazard class has been the risk on which the insurance industry expects to pay the highest losses on average, although hurricanes and earthquakes retain the potential for the most expensive individual claims.
