

Solidum Event Linked Securities Fund Limited - SAC Fund 2

Classes A-1
March 31, 2024

Fund objective

The Solidum ELS Fund is an open-end fund registered in Bermuda. The Fund's objective is to achieve long term capital appreciation and low correlation to fixed income, equity and non-traditional investments. The Fund holds a diversified portfolio of insurance linked securities which can have the structural format of catastrophe bonds, notes and derivatives, industry loss warranties, sidecars, reinsurance contracts or other instruments transferring insurance event risk or genuine insurance underwriting risk. As the insurance event linked securities market evolves, new products may become available and the Fund may also invest in such products. The portfolio is actively managed in an attempt to achieve optimal returns in the context of the prevailing market environment. Leverage can be used in order to enhance investment returns, and active hedging may be employed to minimize downside risk. In addition to its functional currency USD, the Fund offers CHF, EUR and GBP share classes. The equity capital of the non-USD share classes is hedged to reduce FX effects. Institutional share classes are available for investments above defined thresholds.

Manager comment

The Fund achieved an exceptionally good result of 1.89% to 2.17% in the three currency classes.

The issuance activity of the Cat Bond market continued at full throttle. In March, approximately USD 2.3 billion have been placed and close to 4 billion announced for April as insurance companies increase the share of collateralized coverage as a complement to traditional structures in their overall reinsurance programmes prior to the traditional renewal window in June. The fund invested actively and was thus able to secure the currently attractive market conditions.

In March the first forecasts of hurricane activity during the 2024 season were published. The prognostic accuracy of forecasts that far out is still only moderate, and consequently concrete investment decisions based on such information tend to carry a speculative element. But what one can certainly take away is the fact that surface water temperatures in the Mid-Atlantic and in the Gulf of Mexico are high for the time in the year and that La Niña conditions are expected for the main phase of the hurricane season. Both observations lead us to expect an active season. The ultimately decisive factor, however, is whether the shorter-term influencing factors, such as position and strength of the 'Bermuda High', support a tendency for storms to be pushed towards land in areas with high insured values. With current techniques, such factors are as yet not predictable several months out.
