SOLIDUM PARTNERS

Solidum Event Linked Securities Fund Limited - SAC Fund 2

Classes A-1
August 31, 2026

Fund objective

The Solidum ELS Fund is an open-end fund registered in Bermuda. The Fund's objective is to achieve long term capital appreciation and low correlation to fixed income, equity and non-traditional investments. The Fund holds a diversified portfolio of insurance linked securities which can have the structural format of catastrophe bonds, notes and derivatives, industry loss warranties, sidecars, reinsurance contracts or other instruments transferring insurance event risk or genuine insurance underwriting risk. As the insurance event linked securities market evolves, new products may become available and the Fund may also invest in such products. The portfolio is actively managed in an attempt to achieve optimal returns in the context of the prevailing market environment. Leverage can be used in order to enhance investment returns, and active hedging may be employed to minimize downside risk.
In addition to its functional currency USD, the Fund offers CHF, EUR and GBP share classes. The equity capital of the non-USD share classes is hedged to reduce FX effects. Institutional share classes are available for investments above defined thresholds.

Key information

Manager comment

The Fund generated a return of 1.43% in US dollars. The fully hedged CHF and EUR share classes achieved monthly performances of 1.09% and 1.30%, respectively.
As expected, tropical storms in August tended to focus on the Pacific, with damage on land ranging from Hawaii to China, while the Atlantic remained relatively quiet. On August 28, as many as eight tropical systems were active simultaneously worldwide.
On the morning of August 25, seismometers around the world recorded tremors of a magnitude corresponding to an earthquake of approximately 5.2. However, the cause was not a tectonic event, but a gigantic mass movement triggered by the collapse of a large glacier hanging from a steep cliff, together with the underlying rock, on the northern flank of the Langtang massif in the Himalayas, between Nepal and Tibet.
The masses of rock and ice slid down the steep slope, generating enormous heat and causing vast quantities of ice to melt almost instantaneously. Together with rocks, debris and sediment from the valley slopes, this formed a massive and devastating mudflow that surged down the Lende Khola River. The resulting wall of water and debris reached heights of several dozen metres and speeds of more than 130 km/h. The mudflow continued downstream, leaving a zone of destruction that extended for more than 100 kilometres down the Trishuli Valley.
For observers with links to Switzerland, the images brought back memories of the Blatten landslide in May 2025, although fortunately the volumes of ice involved were much smaller. The Fund was not affected by either of these tragic events.
