

Fund objective

The Solidum Cat Bond Fund is an open-end fund registered in Liechtenstein as a UCITS pursuant to Liechtenstein law in the legal form of a trust (UCITS V). The Fund's objective is to achieve long term capital appreciation and low correlation to fixed income, equity and non-traditional investments. The Fund holds a diversified portfolio of catastrophe bonds or notes and other instruments transferring insurance event risk or genuine insurance underwriting risk. As the insurance event linked securities market evolves, new products may become available and the Fund may also invest in such products. The portfolio is actively managed in an attempt to achieve optimal returns in the context of the prevailing market environment.

In addition to its functional currency USD, the Fund offers CHF and EUR share classes. The equity capital of the CHF and EUR share classes is hedged to reduce effects of FX effects.

Manager comment

The year 2024 ended with a strong result, which helped the Solidum Cat Bond Fund to finish 2024 as the second-best year in its history. With a gain of almost 10% to over 14% in the various currency classes, the fund came very close to the previous record year, and even exceeded it in the case of the EUR class.

As in the previous year, the Cat Bond market offered very high risk spreads also in 2024. The asset class thus presented itself as an investment opportunity that compensated its investors with very attractive terms for the event risk associated with the engagement.

The good result is all the more remarkable as it was achieved in a year in which the overall loss burden for the insurance industry was by no means negligible. According to Munich Re, insured losses worldwide totalled about \$140 billion. The lion's share of this came from the United States, with about \$50 billion contributed by the two hurricanes, Helene and Milton, which struck Florida and the US Southeast in late September and early October. Another more than \$50 billion was caused by the Severe Convective Storm hazard class, which includes hail, tornadoes and thunderstorms. For some time now, this hazard class has been the risk on which the insurance industry expects to pay the highest losses on average, although hurricanes and earthquakes retain the potential for the most expensive individual claims.
